PROFESSIONAL SUMMARY

Data Analyst with 1+ year of full-time experience as a Database Analyst, with a hands-on portfolio of independent projects spanning machine learning, dashboards, and Python-based data analysis. Skilled in SQL, Tableau, Excel, and Python, with experience extracting and cleaning large datasets, building stakeholder-ready reports, and deploying analytical solutions end-to-end. Holds postgraduate diplomas in Business Analytics and Project Management in IT from Seneca College. Actively building and shipping real-world data projects. Legally authorized to work in Canada.

TECHNICAL SKILLS

SQL: Complex queries, joins, subqueries, data extraction & transformation

Python: Pandas, NumPy, Scikit-learn, EDA, data cleaning, ML modelling

Tableau: Dashboards, KPI tracking, data storytelling, business visualization

Excel: Pivot tables, VLOOKUP, advanced formulas, reporting

Machine Learning: Random Forest, classification, feature engineering, Scikit-learn

Streamlit: Building and deploying interactive data applications

AI Tools: Claude, ChatGPT, prompt engineering, AI-assisted analytics

Tools: VS Code, Google Suite, GitHub, data documentation

KEY COMPETENCIES

Data Extraction & Analysis • SQL Query Optimization • Data Cleaning & Validation • Exploratory Data Analysis (EDA) • Machine Learning • Dashboard Development • Database Administration • Predictive Analytics • Business Intelligence • Stakeholder Reporting • Data Storytelling • Statistical Analysis • Root-Cause Analysis • Cross-Functional Collaboration

WORK EXPERIENCE

Database Analyst / Data Analyst *July 2024 – August 2025*

1862955 Ontario Inc. — Mississauga, Ontario | Full-Time, 40 hrs/week

- Extracted, cleaned, and analyzed large structured datasets using SQL, writing and optimizing queries for accurate data retrieval to support business reporting and operational decisions.
- Prepared dashboards and performance reports in Tableau and Excel, turning raw data into clear outputs that stakeholders could act on independently without a walkthrough.
- Cleaned, transformed, and validated datasets on a recurring basis, maintaining data quality standards and ensuring all reporting reflected accurate, consistent information.
- Administered user access, monitored database performance, and resolved data inconsistencies proactively — keeping systems running cleanly and reducing downstream errors.
- Documented database workflows, processes, and system configurations, and served as the point of contact between the technical environment and business teams.

ANALYTICS PROJECTS

Spotify Hit Prediction — Machine Learning *2025*

Python • Scikit-learn • Pandas • Streamlit | github.com/arpanmukhia/spotify-hit-prediction

- Built a classification model to predict song popularity using audio features and track metadata from the Spotify dataset, applying full ML pipeline from raw data to deployed app.
- Performed exploratory data analysis (EDA) and feature engineering to identify the characteristics that most strongly predict a track's commercial performance.
- Trained and evaluated a machine learning model using Scikit-learn, tuning features and comparing results to produce a reliable, interpretable classifier.
- Deployed the model as an interactive Streamlit application, allowing users to input track attributes and receive a real-time prediction — making the analysis accessible beyond a notebook.

Customer Churn Analysis — Business Analytics 2025

Tableau • Python • EDA | github.com/arpanmukhia/customer-churn-analysis-tableau

- Analyzed customer churn patterns across a real-world business dataset, identifying the behavioral and demographic factors most predictive of customer loss.
- Built Tableau dashboards presenting churn trends, retention insights, and segment-level breakdowns in a format directly usable by a business or retention team.
- Translated analytical findings into business narrative — framing results around what the data means for decision-making, not just what it shows.

Toronto Transit Delay Analysis — Public Data 2025

Python • Tableau • Data Visualization | github.com/arpanmukhia/toronto-transit-delay-analysis

- Analyzed TTC delay data from open city datasets to identify peak delay periods, most-affected routes, and patterns in transit disruption across the network.
- Cleaned and structured the raw public dataset using Python and Pandas, resolving inconsistencies and preparing a reliable analytical base for visualization.
- Presented findings through Tableau visualizations that surface operational insights — the kind of output that would directly support transit planning or reporting decisions.

EDUCATION

Post-Graduate Certificate — Project Management in IT December 2023

Seneca College, Ontario

Post-Graduate Certificate — Business Analytics December 2022

Seneca College, Ontario

Bachelor of Science April 2021
